by  **KEELA**

Proud to design and manufacture clothing
for the Emergency Services

Police Range

“

What do you want in high performance clothing?

Setting up the company some thirty years ago, this was the question I asked myself. I wanted to be different, to find new solutions to old problems, to deliver the best products possible using the most modern techniques available. We did this then. We do this now. We will do this tomorrow

Our watchwords remain:

Innovation. Quality. Technology.

”

Rube - Managing Director and Founder of Keela

GREEN STUFF	54
LEGACY PROJECT	56

As one of the leading manufacturers of protective clothing for the Police, we are proud of our reputation as a manufacturer of comfortable, high quality performance clothing that is fit for purpose.

Our range of Police garments covers standard outerwear with customisable options such as badges and radio docks as well as high visibility that adheres to EN specifications.

We've included some key styles within this brochure, but please note our full range can be seen on our website, or contact us with your requirements.

Committed to Quality & Innovation for Over 30 Years

Who We Are

At Ilasco we are a 100% wholly owned manufacturer based in Britain, who have worked with the emergency services sector for over 30 years providing our specialist protective solutions to ensure you can focus on the job at hand without interruption.

We are uniquely placed to provide top-to-toe solutions for a variety of specialisations.

As a vertically integrated company we have full control over our manufacture and have access to a range of expertise; meaning our garments are reliable, innovative and produced to fit your requirements.

What We Do

Using our knowledge of the emergency services industry we have created multiple garment ranges ideally suited for Police, Fire, Ambulance, Rescue, Military and more.

Each of these ranges has been designed to tackle the individual problems each of these services face; from ensuring flexibility for ease of movement to providing the ultimate protection from the elements.

As well as our specialised ranges we also offer a bespoke customisation service, allowing both for existing garments from our range to be altered and, if required, for an entirely new garment to be created for your unique needs.

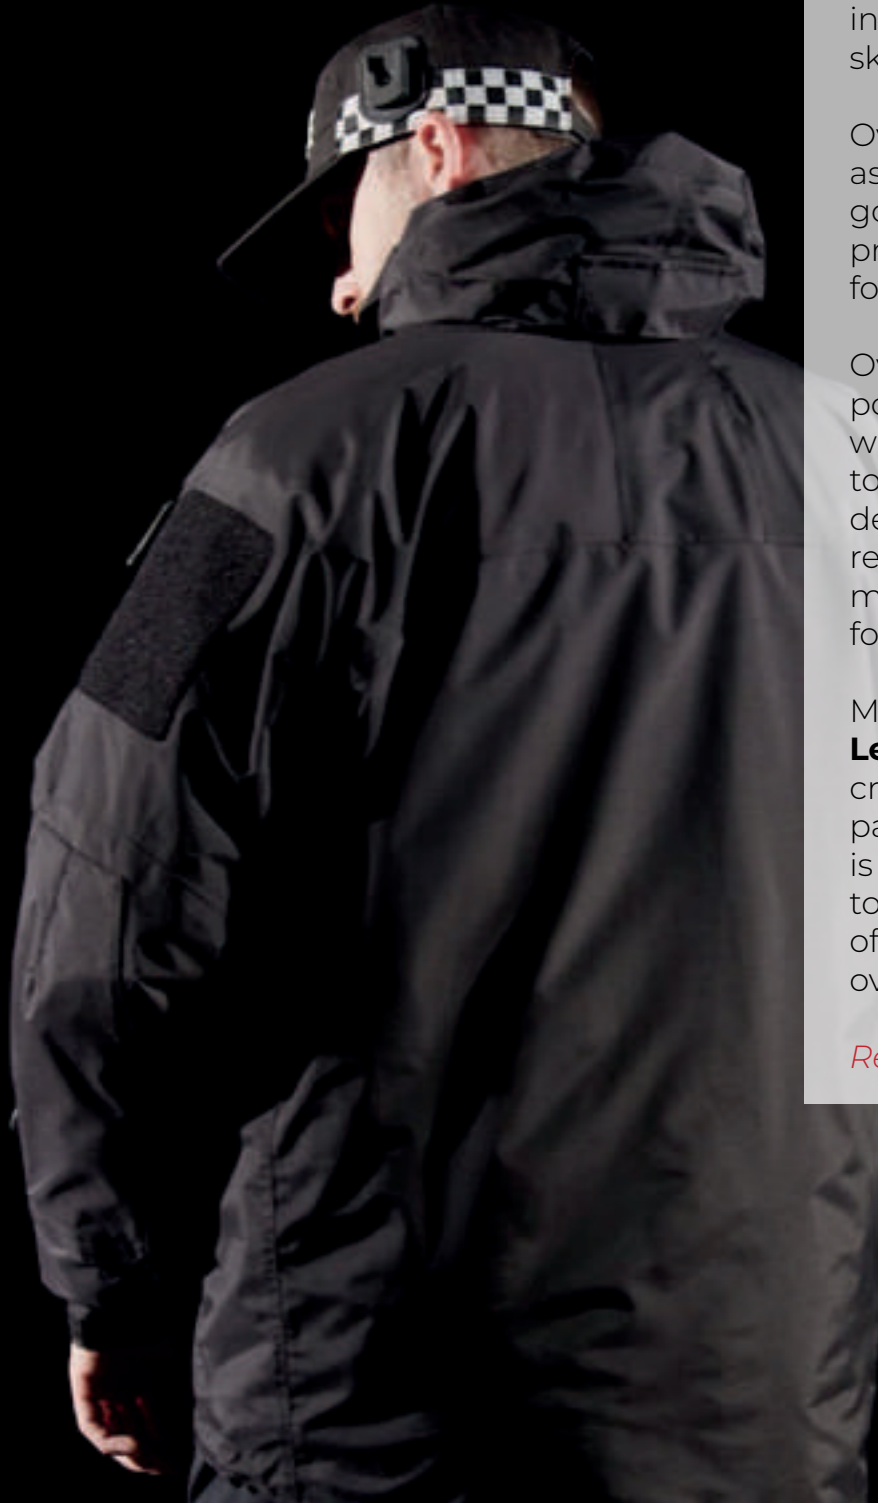

Why We Do It

We believe that when undertaking challenging jobs in difficult conditions, you should be able to focus fully on the task at hand and not be hindered by PPE which is not fit for purpose.

Using our expertise and approach to innovation we aim to create garments which can be relied on to perform everywhere; whether you're waiting for the call or out in an emergency situation.

Can't find a standard garment that meets your requirements? At Ilasco we pride ourselves on making uniform procurement easy, we take your requirements and provide you with innovative solutions – contact our team and allow us to turn your specification into the perfect kit.

sales@keela.co.uk | ilasco.co.uk | +44(0)1592 777000

We've become known for pushing the boundaries of innovation, with our range of testing machinery and skilled teams of machinists, designers and engineers.

Over 2020/21, our **UK Manufacturing** site expanded as we committed to the production of over 750,000 gowns to hardworking NHS staff. In 2022, we felt very proud to receive a UK Government Early Day Motion for our Covid efforts, along with a Civic Award.

Over the decades, we have always been keen to support staff with disabilities and disadvantages- finding what people are great at and supporting individuals to improve their skills is important to us. In 2022, we decided to make this official, and we are thrilled to be recognised as a **Supported Business** by BASE, which means that over 30% of our UK manufacturing workforce have a disability or a disadvantage.

More recently, we were thrilled to be awarded for our **Legacy Project**, which includes 7 areas which can increase the lifespan of your kit through ways such as repairing, recycling and repurposing. The Legacy Project is the latest outcome of our long-term commitment to UK manufacturing, sustainability and protection of the environment, which we've been embracing for over three decades.

[Read more about our Legacy Project on page 56](#)

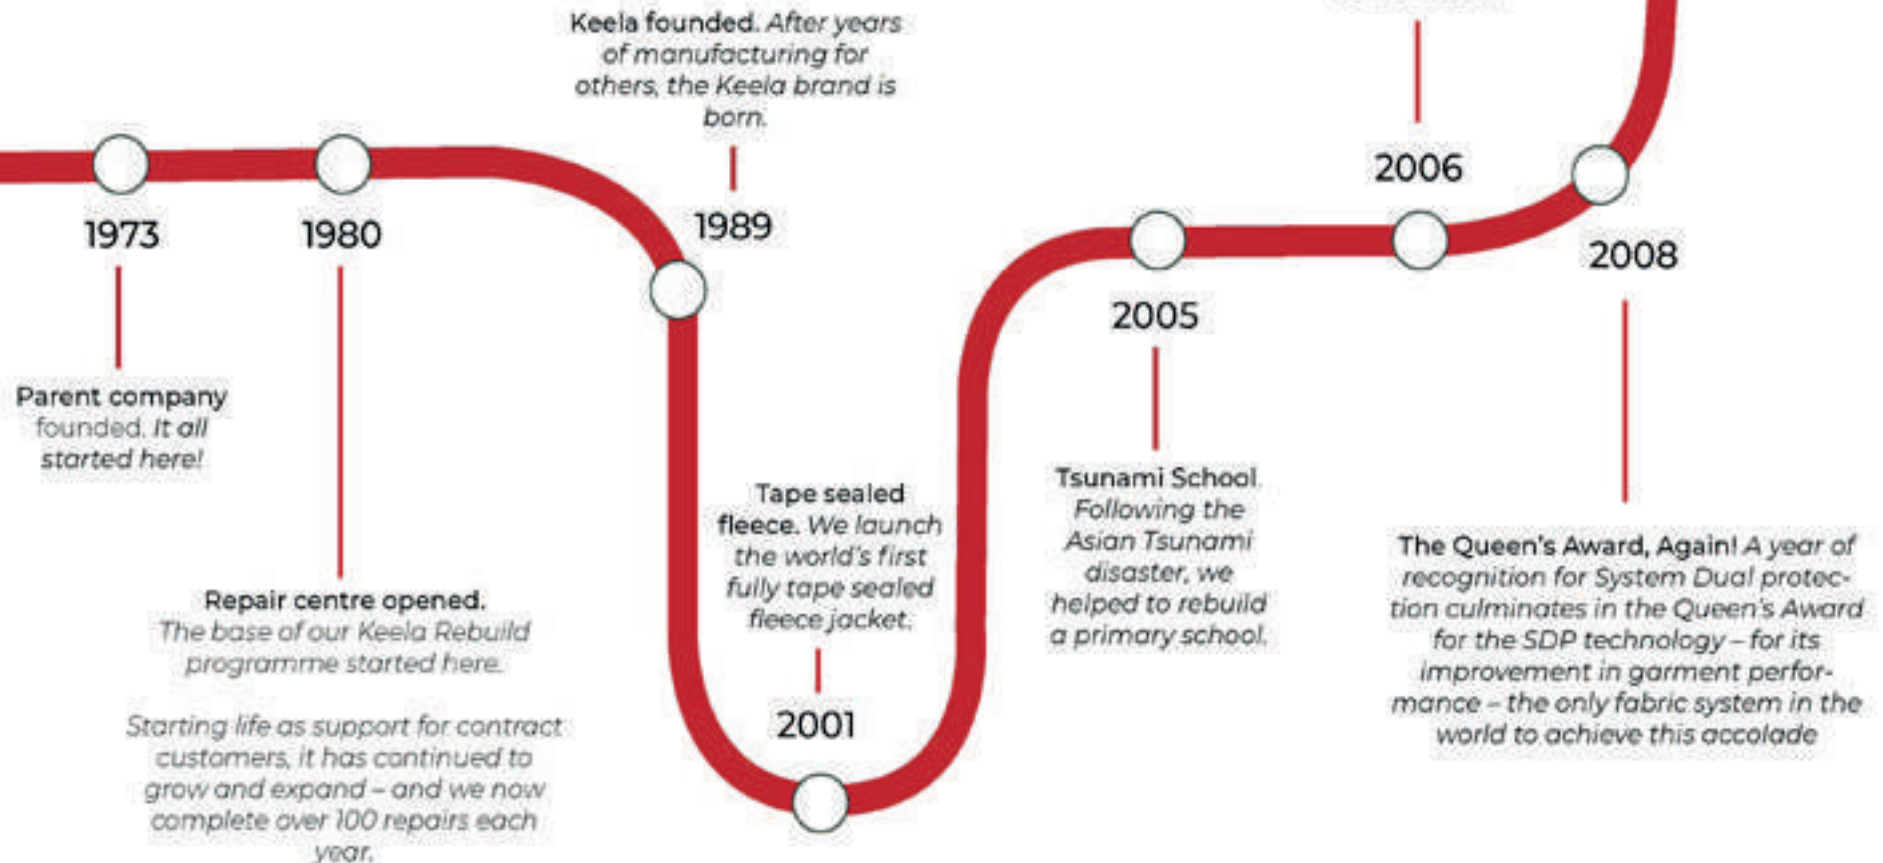

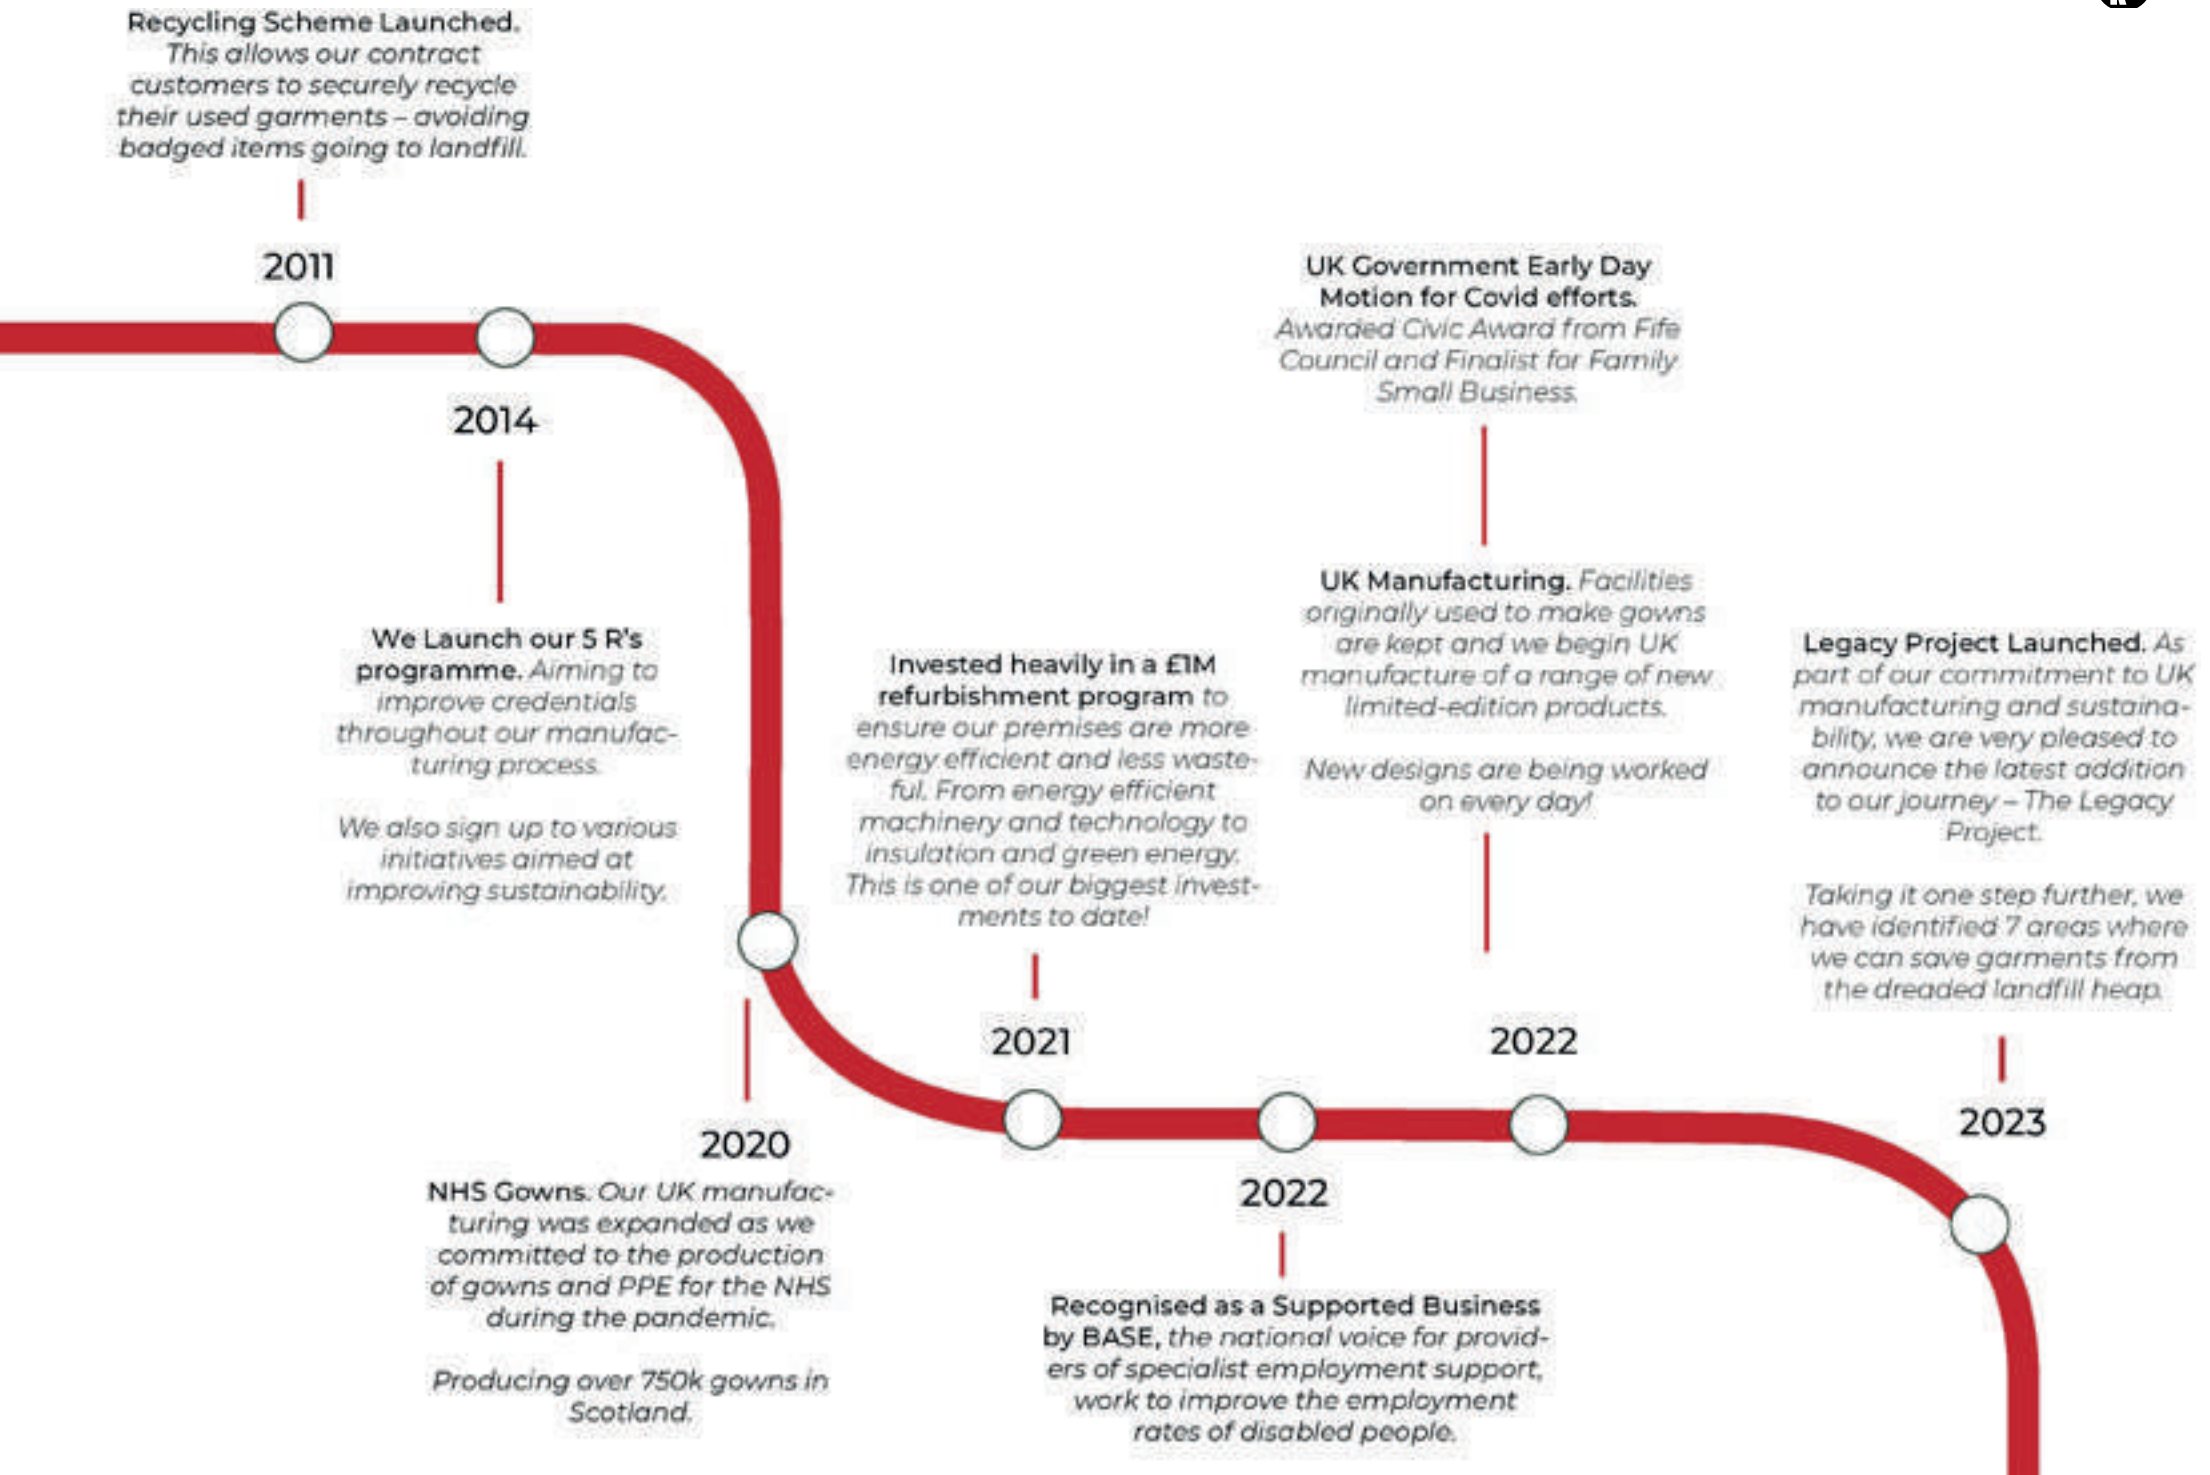

How Keela Was Made

Trusted by Professionals for over 30 years.

Keela was founded on the East Coast of Scotland, the perfect place to innovate and test garments for the changeable British weather. With our HQ located in Glenrothes, we continue to provide UK-led designs.

We appreciate the continued support of our Keela family – which has meant that in an era of third-party manufacturing, we can continue to provide our garments in an ethical and sustainable manner.

Firearms Thor Outer Jacket

87255

Designed in conjunction with firearms teams, the Firearms THOR is a lightweight outer shell jacket providing protection all year round.

Our next generation of rain protection takes our award-winning technology to the next level. Offering unparalleled quality and rain protection without the weight no matter what the conditions.

FEATURES

How does our SDP system work?

The simple, no-technical explanation is that our system is waterproof and breathable, so it keeps you warm, dry and comfortable. If you're looking for the technical reasons, buckle up – here we go.

We use an outer layer and an inner layer, with an air gap in between that helps retain heat. The outer layer is breathable, the inner layer is highly wicking, which draws moisture away from your skin and into the air gap.

The combination of the air gap and wicking process regulates body temperature, minimising overheating when active and shivering during inactive periods, keeping you comfortable and safe.

It's a technology that we're justifiably proud of. And winning The Queen's Award for Enterprise: Innovation only goes to underline its importance for so many of these users across the world.

System
Dual
Protection®

The world's only waterproof performance clothing technology that manages inner condensation in wet and cold conditions.

We're proud of the achievements of our System Dual Protection (SDP). It's the world's only waterproof performance clothing technology that manages inner condensation in wet and cold conditions. Which means it's the fabric you want next to your body when you're caught in a downpour.

It's such a good product that we received **The Queens Award for Enterprise: Innovation** in 2008. This award is one of the UK's most prestigious awards that recognises outstanding achievement in the field of international trade, innovation and sustainable development.

All these accolades mean just one thing: you can stay out for longer and remain more comfortable when you're wearing as good at keeping you dry from external elements while also keeping you dry by wicking perspiration away from your body.

“

System Dual Protection is more than just another fancy fabric brand. It's the only performance fabric in the world to be awarded a Queen's Award for Innovation and to be highly commended by the Home Office Scientific Development Branch.

”

Munro EN471 Jacket (Police) 80253

Robust and durable, the Munro EN471 Jacket provides waterproof protection and increased safety for on the road or during a call out.

Customisable - MOQ's may apply

Full FR non-drip versions available, MOQ & lead times apply

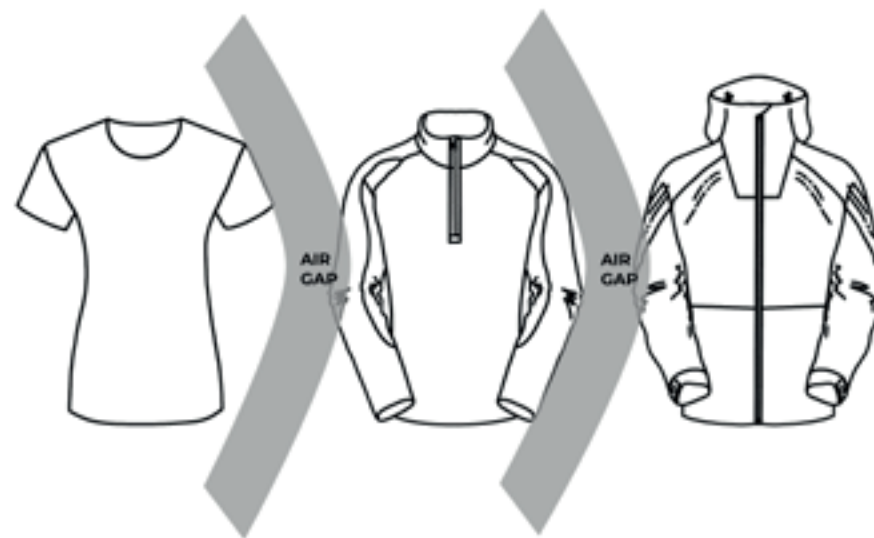

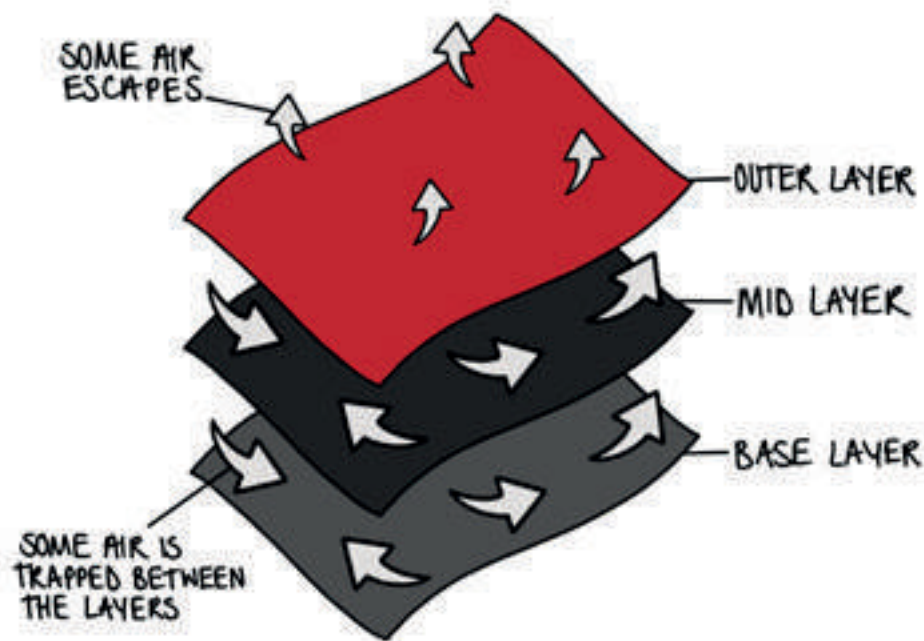

We've been working with the Emergency Services sector for over 30 years, and in that time have built up a collection of knowledge on what kit works best.

What is a layering system?

In the simplest terms, a layering system is using multiple items of clothing to keep you warm and dry, rather than one thick layer.

A standard layering system is made up of a **base layer**, **mid layer** and **outer layer**; although you can add additional layers or take them away as needed.

Why are multiple layers better than one?

The way your clothing keeps you warm is by trapping a layer of warm air between you and it, which then acts as insulation.

When you have more than one layer on this creates multiple air layers which trap the warm air, this provides efficient insulation as when the air escapes from your innermost air layer it then gets trapped at the next one instead of escaping straight out.

If you were to just wear one layer (even if this was your biggest, thickest jacket) that one air gap can't hold as much warm air, and doesn't provide as much of a barrier to stop the warm air escaping.

Mid & Base Layers

With such a range of situations that can be encountered, we have developed a full range of garments designed to ensure comfort; whether lots of warmth is required for working in cold conditions or good wicking properties to stay cool in warmer weather.

View the full range on our website

Hydron Jacket 32000

Durable and technically advanced softshell jacket, offering windproof and water-resistant protection.

Using some of the most advanced technology our AirXtream Fusion fabric features a matrix inner face which regulates the movement of air and moisture away from the body; this paired with 2-way stretch and high water and wind resistance make the Hydron Softshell perfect for any teams.

FEATURES

- Water-resistant
- Windproof
- Highly breathable
- Air Channel Matrix condensation-control inner
- Two-way stretch
- Fixed, helmet-compatible hood
- Two zipped hip pockets
- Two zipped chest pockets
- Full-length front zip with inner storm flap
- Pit zips for ventilation
- Scooped back for extra protection
- Hook-and-loop adjustable cuffs
- Shock cord with locks at hem

FABRIC: AirXtream Fusion

SIZES: XS - 3XL

Genesis Fleece

31630

Cutting edge technology is not commonly associated with a fleece; the Genesis however is not your typical fleece. The Innovation XL lining system has a hydrophilic film and high wicking properties to provide an inner sealed cocoon against the elements.

This award winning waterproof fleece has excellent breathability, with reinforced shoulders and action sleeves for durability and movement.

FEATURES

- Waterproof & windproof
- Breathable
- Condensation control
- Neck baffle
- Reinforced shoulders & elbows
- Zipped hip pockets
- Articulated sleeves
- Elasticated cuffs
- Shockcords with locks at hem
- Fully tape sealed

Mocha Advance Zip Top 30150

Constructed using the non-pill, easy care Zetland 100 fabric, the Mocha features zipped collar for ventilation and relaxed fit for increased mobility.

In the summer months, this zip top acts as the perfect outer/mid layer with its short collar and zip ventilation which provides air flow and its super soft feeling fabric. Come the winter and it can be taken down a layer to become your base or mid layer, providing insulation to help you retain warmth. The Mocha advance is breathable and actively allows perspiration to escape by wicking excess sweat away from your body, keeping you drier and more comfortable.

FEATURES

- Short collar
- Zip at neck for ventilation
- Loose fit (or downsize for a close fit)
- Quick dry
- Lightweight and packable
- High Wicking
- Breathable
- High warmth to weight ratio
- Flat lock seams
- Easy care
- Non pill

FABRIC: Zetland Micro

SIZES: 2XS - 3XL

Customisable - MOQ's may apply

Can be made into a 'Police Microfleece' with the addition of epaulette loops & branding on the sleeves

HW Op Trousers

86380

Hardwearing and practical, the Heavyweight Operational Trousers provide comfort and durability. Combining the four way Stretch Tec fabric with a durable design the Heavyweight Operational trousers are designed to take a pounding.

Combining the four-way Stretch-Tec Advance fabric with 100% nylon ripstop fabric on the knees and ankles, the HW OP trousers are hard wearing and practical, ideal for year round close proximity searches.

FEATURES

- Two hip pockets with inner security pocket
- Zipped cargo pockets on each leg
- Half elasticated waist band
- Knee and ankle patched for extra reinforcement with 100% Nylon ripstop fabric
- Zip on outside leg seam with inner stormflap
- Front fly close with zipper and waist closed with metal clip
- 3mm elastic shock cord with two hole toggle for easy adjustment
- Quick dry four-way Stretch-Tec fabric
- Same style as the LW OP Trousers, but made with a heavier fabric

FABRIC: StretchTec Advance

Manufacturing, Sourcing & Customisation

If required, we are well-equipped to facilitate alterations to existing garments within our range at our UK factory. We also have the capability to design and manufacture entirely new garments tailored to your specific requirements. (MOQs may be applicable)

In conjunction with our existing Police and Keela range, we are pleased to extend our services to externally source any supplementary products, allowing you to get the most out of working with Keela.

Backed by our extensive industry experience, we have dedicated teams of designers, manufacturing specialists, and experts in Research & Development. This collective wealth of knowledge empowers us to deliver an end-to-end service, spanning from the initial design phase to the eventual manufacturing of the finished product.

We offer a full range of in-house facilities, including:

- Research & Development
- Design and pattern making
- Development sampling
- Special measure service
- Manufacturing - small or large runs

Our team of highly skilled experts have knowledge honed through decades of garment innovation, design and manufacture.

A holistic approach to your requirements

We have the technology, know-how and capability to meet your customisation, branding and bespoke requirements, with efficient turnaround times.

CRAFTSMANSHIP

UK MANUFACTURING FACILITIES

TESTING LABORATORY

R & D FACILITIES

TECHNICAL DESIGN SUPPORT

QUALITY ASSURED

Our customisation service allows our standard garments to be altered, allowing for even greater flexibility and a garment which fits your every requirement. We offer a variety of different methods to bespoke, brand and customise your garments:

WATERPROOF EMBROIDERY

Our technical expertise and use of seam-sealing tape means even after embroidery waterproof garments will remain fully waterproof

BADGING

This includes a range of sizes and shapes, as well as reflective badges.

VELCRO REMOVABLE BADGES AND IDENTITY HOLDERS

We can provide badges with Velcro backing and can also add Velcro patches to garments

CONCEALED PULL-OUT IDENTIFICATION

More commonly used in security applications, we can provide concealed pull-out identification options for your garments.

RADIO DOCKETS (Peter Jones) AND LOOPS

- TFC (Thread Free Construction) methods
- Improved cosmetic appearance
- Robust performance
- Can provide softer radio loops – suitable for use where comfort may be compromised

REFLECTIVE TAPE

- Able to sew or bond on the full range of 3M glass bead or encapsulated reflective tapes to our garments

OTHER ADDITIONS

- Epaulettes
- Pockets - variety of small & large, internal & external

Please note, much of Police bespoke work, such as badges and tapes, is restricted, and is only purchasable via an official purchase order.

To help us keep track of what we're doing, we keep an eye on the leaves, the branches, and the trees:

Green Stuff

We're committed to improving our sustainability and reducing our impact on the environment in all areas – we think it's important to look to real commitment and changes and avoid just 'greenwashing' – as part of this we're also committed to helping you reduce your impacts, without you even needing to think about it!

We are not here to preach to you – we believe this is a journey we take together.

As a technical outdoor manufacturer, we have always been invested in ensuring we look after the planet's resources wisely. It's been the cornerstone of our DNA to ensure that we manufacture durable technical clothing responsibly and without breaking your bank balance.

That's why for over 40 years we have had our 'Clothing Hospital', a repair centre here in Glenrothes, Fife. Making products last longer and offering a repair service to prolong garments is a key factor of what we do.

But can we do better? Of course! We can all do better.

It's by working together that we can make a difference – even a small change made by many people can add up to a big impact. So this can include things like washing items less or at a lower temperature (which we are encouraging through changes in our care guidance) – as well as items we look at as a company, such as ensuring all of our designs are robust and can last a lifetime of adventures!

So how do we go about this? Trying to do the right thing is not always easy.

We, like others, take a measured approach using our 5 R's as our guidelines to help our team and our suppliers work towards a greener and more sustainable future without 'greenwashing'.

Keeping it Real

The road to sustainability is a long one, but we're constantly looking to improve, and as part of our approach we follow the "5 R's".

Reduce

We are working to reduce waste wherever we possibly can. Whether that is by reducing our clothing pattern fabric consumption, the reduction of packaging or limiting travel abroad.

Rebuild

Since the 80's we've had our Keela Rebuild repair programme, allowing well-loved clothing to be given a new lease of life, meaning they can be enjoyed for longer. A small tear can be enough to put a jacket to landfill, but a small repair can mean that jacket can carry on for years more.

Recycle

Recycling is one of the easiest things we can do as a company. Where possible we recycle what we can, ensuring all areas of our workplace have recycling points; we also use recyclable packaging, and are looking to increase our use of recycled materials.

Respect

At the basis of what we do, we ensure we have respect for all around us. A respect for the planetour resources, our team and our customers. We aim to do as much as we can, from restoring local walking paths to ensuring our supply chain is ethical and sustainable.

React

The world of outdoor-wear is constantly changing, and we want to make sure we can be reactive to this. As more innovative fabrics and components come out, our team explore whether these could be an appropriate and more sustainable alternative for our products. Whether we are moving away from harmful chemicals, or moving towards ethical alternatives in materials, we're always looking to improve.

As part of our commitment to UK manufacturing and sustainability, we are very pleased to announce the latest addition to our journey – The Legacy Project.

Taking it one step further, we have identified 7 areas where we can save garments from the dreaded landfill heap, read more on page 30 or on our website:

WHAT IF?

What if we repurposed our old bits of kit? What if we passed on rather than disposed of? What if we washed less and wore more? What if we mended and made do? What if we aspired to zero waste?

For over 40 years in our Keela hospital we have brought garments back from the brink of destruction. Stitching, patching, sealing, bonding and everything else we can think of – all to reunite prized possessions with their owners, so they can keep exploring for years to come. As part of our commitment to UK manufacturing and sustainability, we are very pleased to announce the latest addition to our journey – The Legacy Project. Taking it one step further, we have identified 7 areas where we can save garments from the dreaded landfill heap.

We're known for pushing the boundaries – and part of the way we do this, is by letting our designers try all sorts of different concepts!

Sometimes it's a design for a whole new style, other times we test new fabric, trims and methods of manufacture.

Whatever we discover, although not every idea is adopted into our range, it does mean there are lots of

We admit it – sometimes we can be real hoarders. For every product we create, we hold a 'gold seal' sample – which we use to make sure we produce the same high-quality time and time again. But as we discontinue items, where do these gold seals go? Why, we package them up and hide them in our design room of course!

But we think they deserve a better life, out on the hills where they belong – so our Archive collection is your chance to get your hands on some of our older, classic designs.

If you've had a jacket for 5, 10, 20 years (or even longer!) it can be difficult to give it up. When your item hits the end of its life and just can't be resurrected, that's where 'Second Life' comes in to play. You send the item back to us, and our team take what fabric they can from it, and turn it into something new.

Just imagine your old waterproof jacket enjoying a second life as a gym bag for carrying your other kit! If you fancy trying your hand at remaking your items at home, you can get some ideas and guidance on our website!

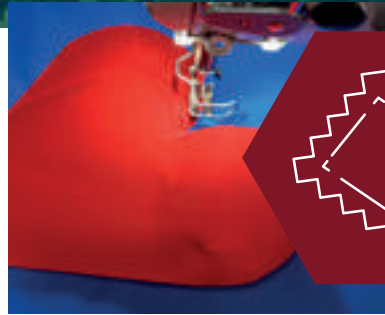

A culmination of our work in 2022, the Legacy Project has been developed to expand our ethos of keeping outdoor kit going for as long as possible, and to encourage the Keela customer to join us on our journey towards reusing, repairing and ultimately, zero waste.

To read more about the project, scan the QR code.

Legacy Project

CLOTHING HOSPITAL

We have run our clothing hospital since the 1980's! Although good care can keep your kit working well for longer, there's always going to be times where you just can't avoid something going wrong.

If you find your trusty trousers or favourite jacket has a rip, tear or other malady – our team will do their best to repair it so you can go on enjoying the outdoors – so don't despair, just contact us and our team will walk you through the repairs process!

As a company we sometimes end up with a few rolls of fabric sitting waiting to be used for various different reasons. These rolls are usually enough to make 20-50 items, and we think it would be a tragedy for them to sit and gather dust, so we have committed to using these wherever possible. In some cases, we use existing designs with some special tweaks, and for certain fabrics they call for something entirely unique. These limited run items allow us to have a bit of fun – so we hope you enjoy what we come up with!

MA DEA VU

RECLAIM

Occasionally we receive back items and, for whatever reason, it hasn't gone back to its original owner, when damaged in any way we always look to repair and refurbish it, but the design may end up looking different from the original. We test the repaired garments to ensure they reach our standards, and when satisfied we can look to put them on our website. Giving you the chance to get a unique version of some of our classic designs, or a (cheaper!) refurbished version – and still with our Keela Guarantee!

Despite our best efforts, sometimes an item has been so well-loved, it just can't be saved or turned into something new. But when the time comes to say goodbye – we can provide an alternative – send your item to us and it can join our recycling programme. All items are collated and then sent to our recycling partner, to be shredded and turned into insulation (and sometimes other things!) – a more fitting end for your beloved jacket than ending up in a landfill.
